

If you can read this. That means you have been looking for a CMYK colour chart. Just as I did and struggled to find one. I have created this file for personal use and thought that others might have use for it as well. Since it took me a while to create I would like everyone to benefit of the effort.

Although I have tried to create a flawless chart, to be a colour guide for the printers I am using. I do not hold any responsibility for any use or misuse of this file (in short if you have any problems due to using this file, I will not be responsible for any inconvenience being legally or illegally) the file is to be distributed for free and to be used at your own risk.

The file is divided into three sections, 2 colours mix, 3 colours mix and four colour mix.

I have tried to create a file as practical as possible, keeping the pages and format to a bare minimum without sacrificing the number of combinations or the size of the smallest swatches.

To view the file properly, you have to make sure to use overprint preview in your viewer. To print the file to a printer that does not support overprint, make sure to use simulate overprint from your print menu.

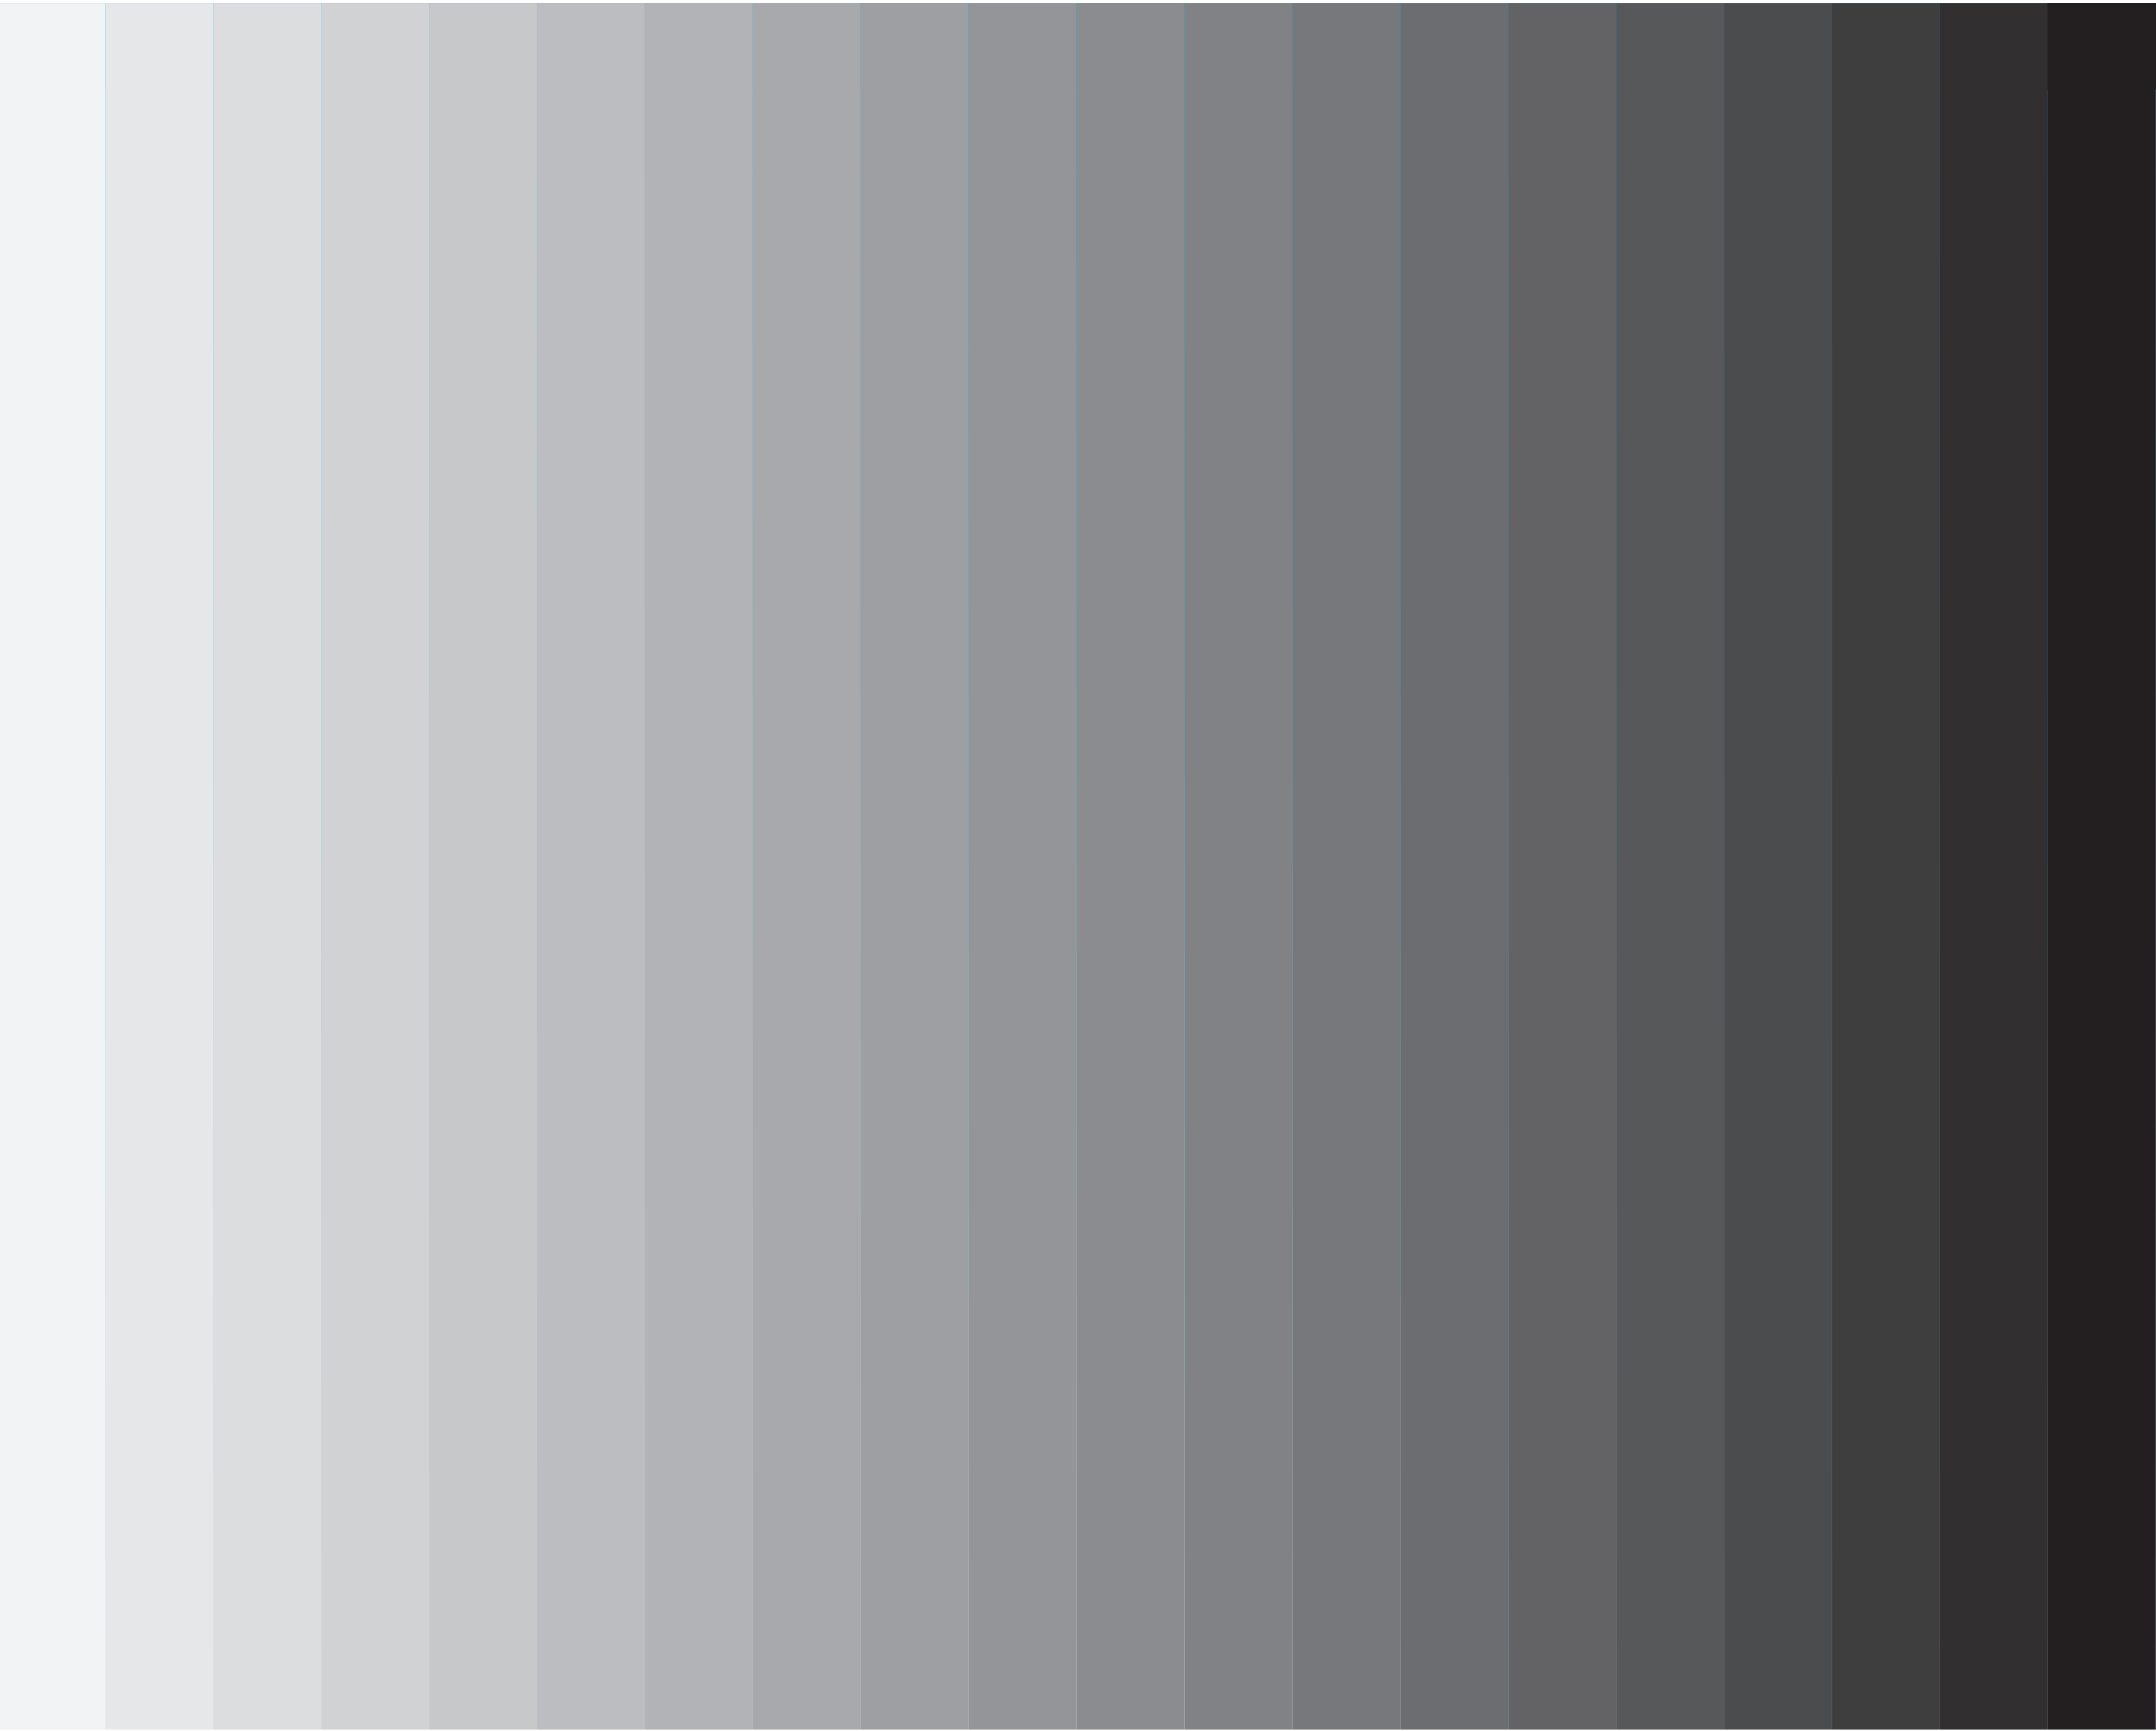

Programs and names mentioned above are the respective trademarks of their own companies.

I hope you enjoy using this file and find it useful.

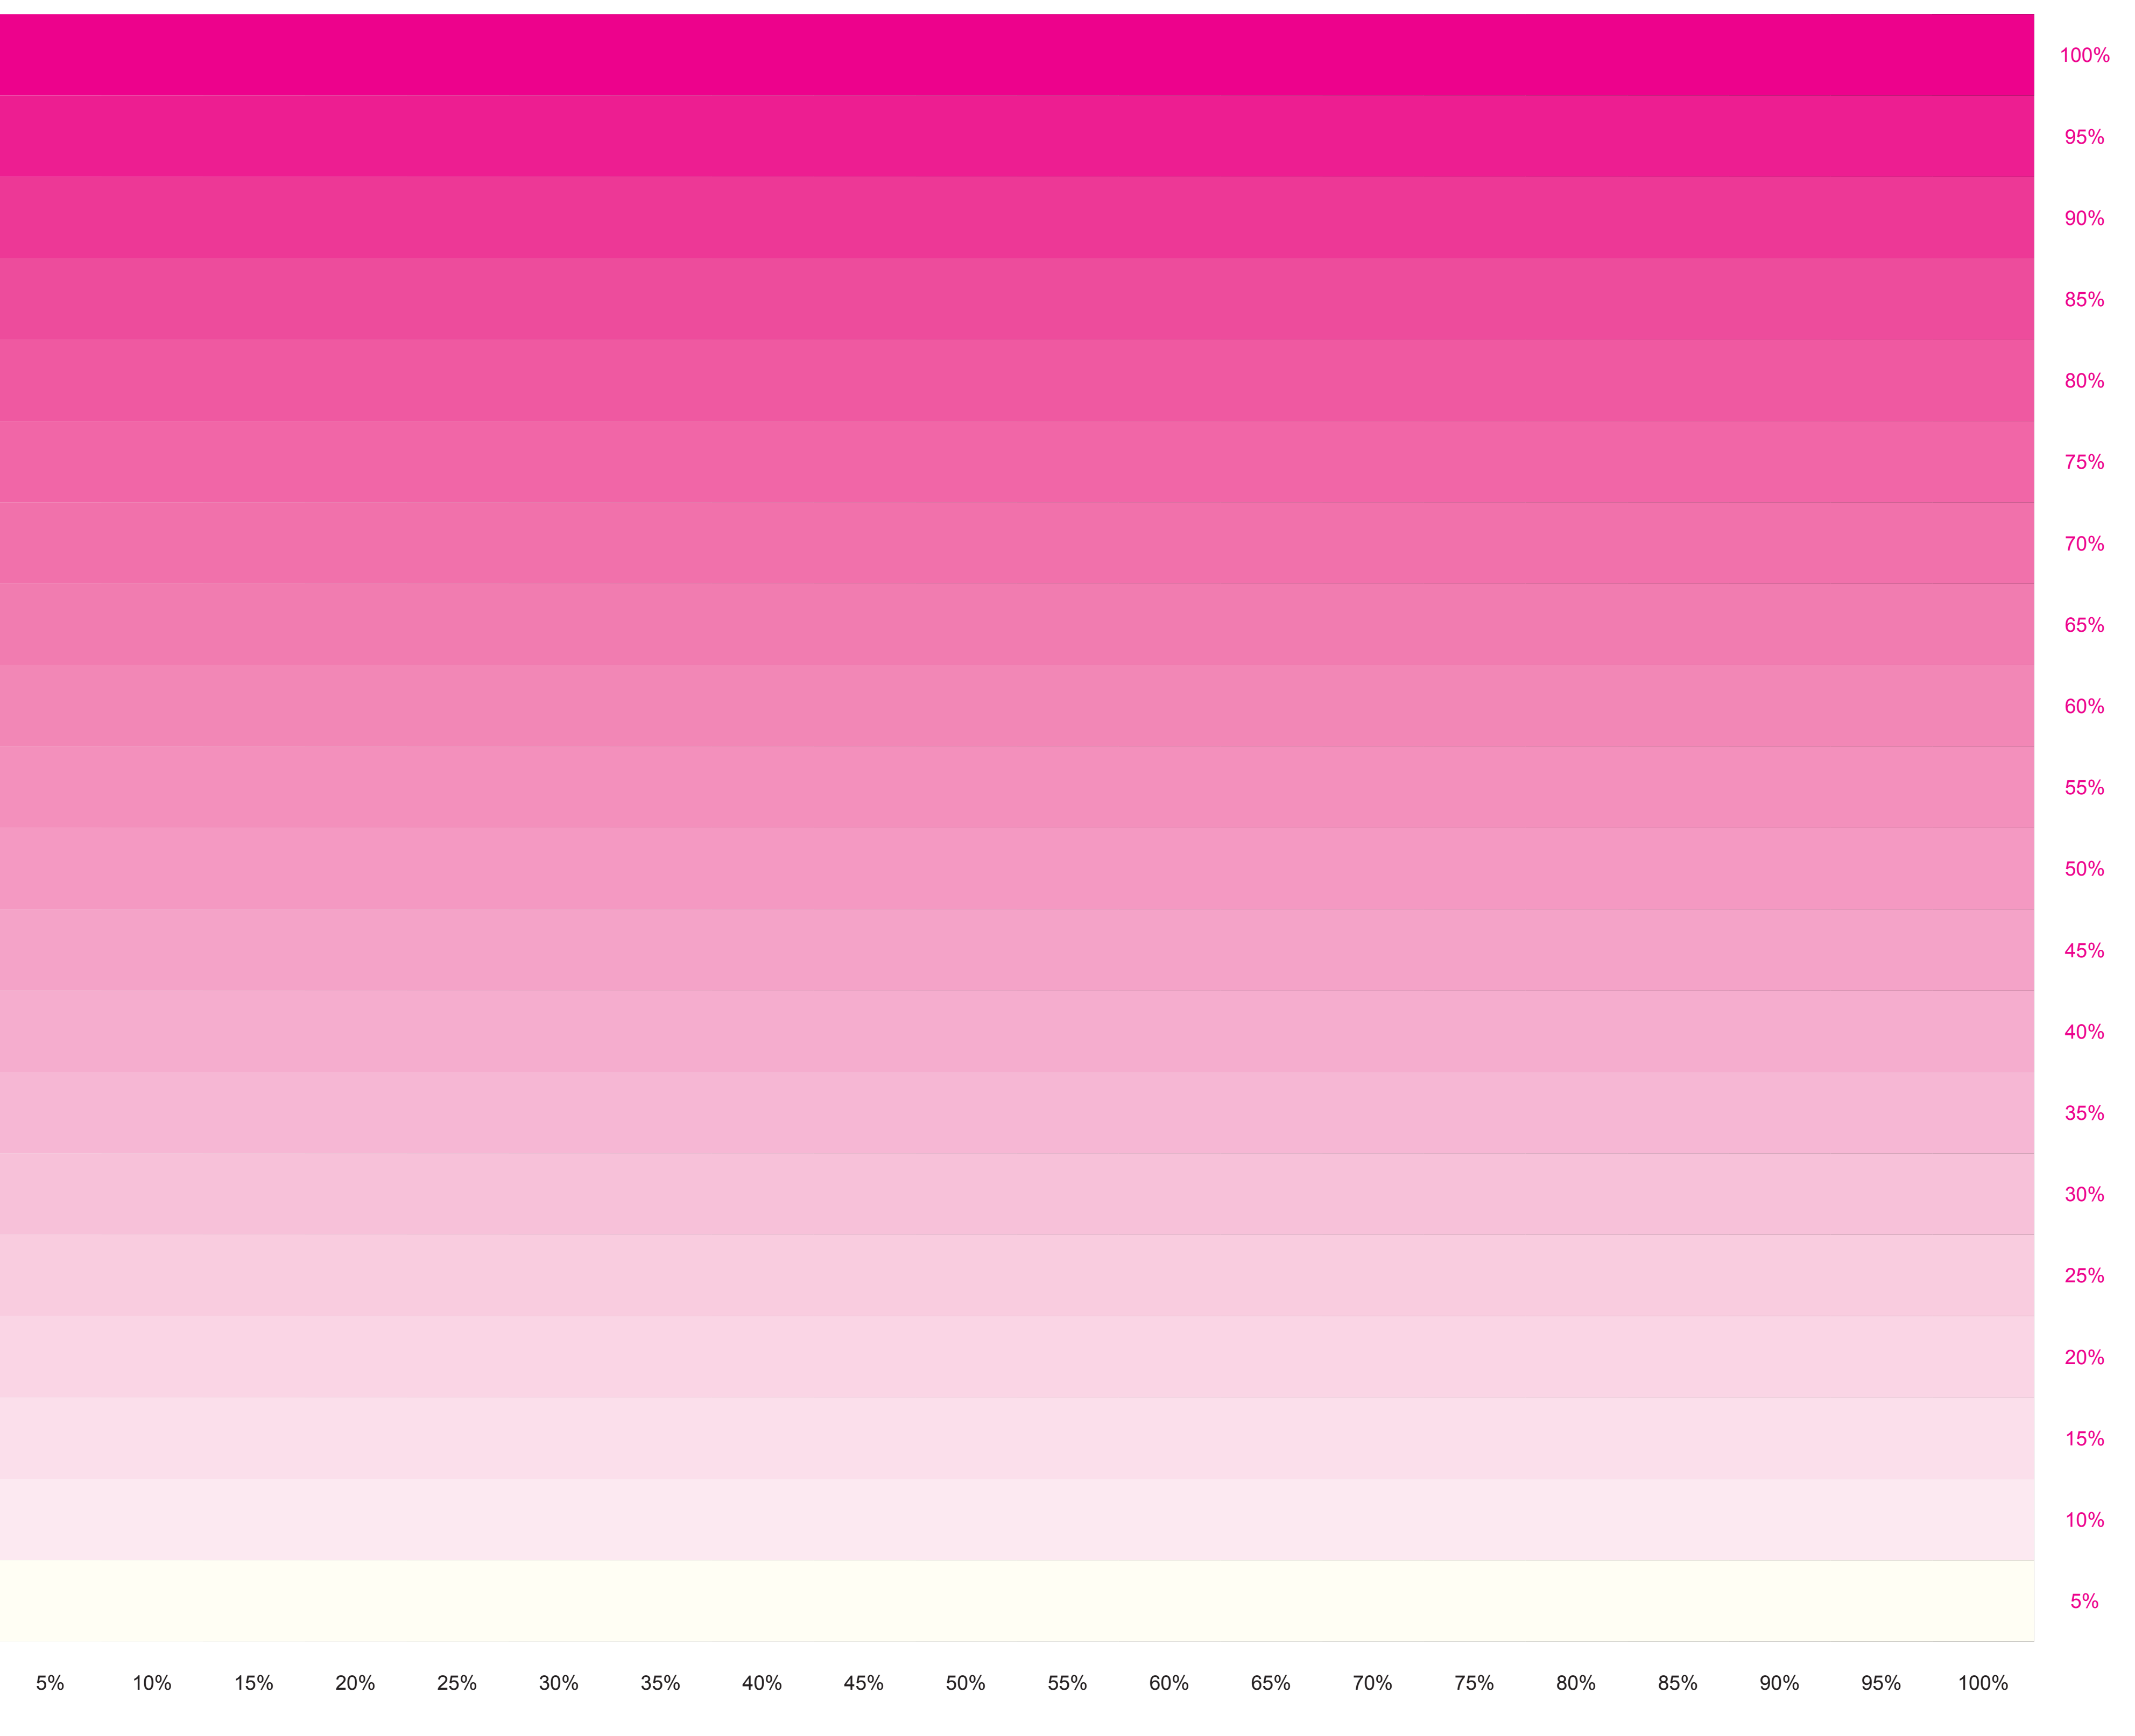

Do not hesitate to contact me if you need any assistance concerning the print or the viewing of the file or even if you have any suggestions to improve on it.

Best Regards,
Jean Claude Boujaoude
